Introduction

For the safe carriage and separation of stores, it is important to know the flow field environment the store experiences during flight. In order to further the understanding of flow fields in rectangular box cavities at subsonic and transonic speeds, an experimental investigation was conducted to determine cavity flow characteristics. Static- and fluctuating-pressure levels within a cavity over the range of length-to-depth ratios where open, transitional, and closed flow were expected to occur were measured. A rectangular box cavity in a flat plate was tested in the Langley 8-Foot Transonic Pressure Tunnel at Mach numbers from 0.20 to 0.95 at unit Reynolds numbers around 3×10^6 per ft. Cavities were tested over length-to-depth ratios ranging from 1 to 17.5. Cavity width-to-depth ratio was varied from 1 to 16. The boundary layer approaching the cavity was turbulent. This supplement presents a complete tabulation of the static-pressure data obtained; dynamic pressures are not presented in the report.

Symbols

CPXXX	pressure coefficient for orifice number XXX, $\frac{p-p_\infty}{q_\infty}$
<i>h</i>	cavity depth, in.
<i>l</i>	cavity length, in.
<i>M</i> _∞	free-stream Mach number
<i>p</i>	measured static pressure, psf
<i>p</i> _∞	free-stream static pressure, psf
<i>p</i> _{t,∞}	free-stream total pressure, psf
<i>q</i> _∞	free-stream dynamic pressure, psf
<i>R</i> _∞	free-stream unit Reynolds number, per ft
<i>T</i> _{t,∞}	free-stream total temperature, °F
<i>w</i>	cavity width, in.
<i>x</i>	distance in streamwise direction, in. (see fig. 2)
<i>x</i> _b	distance from cavity leading edge to leading edge of bracket, in.

y distance in spanwise direction, in. (see fig. 2)

z distance normal to the flat plate, in.
(see fig. 2)

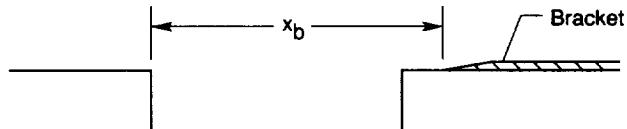

Model Description

A rectangular, three-dimensional cavity was mounted in a flat plate. A photograph of the model mounted in the tunnel is shown in figure 1, and a sketch of the model is shown in figure 2. A boundary-layer transition strip was applied to the leading edge of the flat plate to ensure that the flow entering the cavity was fully turbulent for all test conditions.

Cavity length was remotely controlled with a sliding assembly that enabled the cavity to have a maximum length of 42 in. and a minimum length of 1.2 in. The width of the cavity could be varied by inserting new side walls, aft wall, and sliding plate. The floor of the cavity could be moved to vary the cavity depth. The cavity widths tested were 2.4 and 9.6 in. The cavity depths tested were 0.6, 1.2, and 2.4 in. Table 1 provides a summary of the configurations tested.

Brackets were positioned on the surface of the flat plate, downstream of the aft wall, to prevent the cantilevered portion of the sliding assembly from deflecting above the plate surface (see fig. 3). The brackets were used for most configurations and consisted of two metal supports downstream of the cavity, positioned to overlap the sliding assembly and the flat plate.

The location of the bracket leading edge relative to the cavity leading edge (*x*_b) is shown in the following sketch:

The value of *x*_b is provided in the following table. These data, based on the run number, are given for correlation with the tabulated data in the supplement.

Run	x_b , in.
6	No brackets
8	No brackets
9	No brackets
10	No brackets
13	No brackets
25	35.97
26	25.47

38	9.72
39	14.97
40	14.97
41	20.22

The model was instrumented with 148 static-pressure orifices. The static-pressure orifice locations are provided in figure 4. The main report assesses the effect of the brackets on the static-pressure measure-

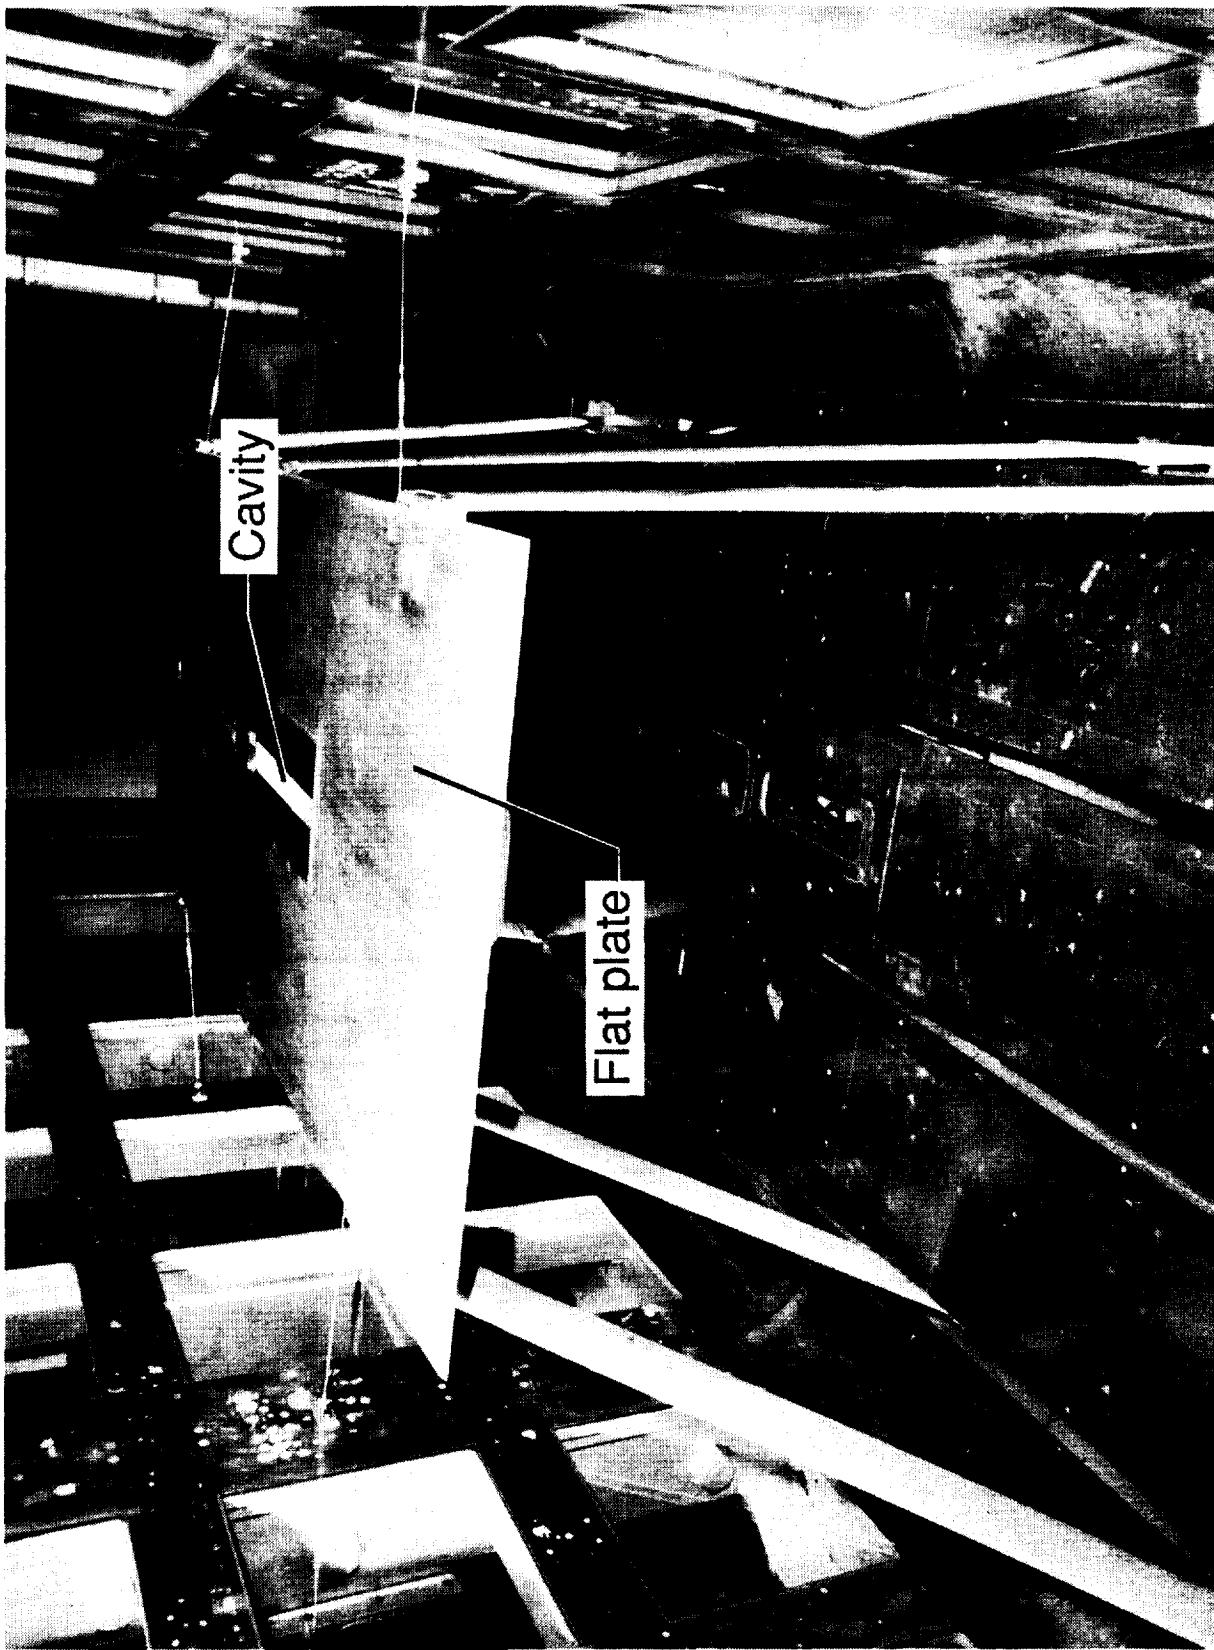

ments within and near the cavity. It was shown that for the data available, the brackets had negligible effect on the static pressures within and near the cavity at the positions where pressures were measured.

Presentation of Data

The static-pressure measurements, reduced to coefficient form, are presented as tables 2-22. (These tables are also available on an ASCII-formatted floppy disk at the back cover of this supplement.) The tables contain the exact tunnel test conditions as well as the measured pressures on the model. The pressure data are presented as CPXXX, where XXX refers to the orifice number. (The orifice number and its location are presented in figure 4.) The data for static-pressure orifices that were not available are removed from the tabulation. The following chart lists the presentation of the data tables:

M_∞	Table number			
	$w = 9.6$ in. $h = 2.4$ in.	$w = 2.4$ in. $h = 2.4$ in.	$w = 9.6$ in. $h = 0.6$ in.	$w = 9.6$ in. $h = 1.2$ in.
